Doctor's Instructions

Instructions for Fiji

Fiji had a very large sebaceous cyst that had a secondary infection. To treat this the areas of infection were surgically removed and flushed with saline. He will also need to be on TMS 0.60 mls two times a day for 7 days. Please check incision daily for any signs of infection.

Instructions for Cottontail

Cottontail has deep wounds into the leg that involves a serious secondary infection as well as torn muscles. The wounds have been thoroughly cleaned, flushed and repaired as indicated. Due to the severity of the wounds he will need to be bandaged for the next 1 to 2 weeks with bandage changes every 3 to 4 days.
Please keep Cottontail on pain medication (Metacam 0.36 ml by mouth once in the evenings) and Baytril 10 mg/ml (1.1 ml by mouth 2 times a day) until directed to stop. Also to help him adjust he should be placed on oral valium 5 mg/ml (0.25 by mouth 2 times a day for 5 days).

Next bandage change should be Wed or Thurs, sooner if problems.
