Endocrinology Lab Case # 09-3126

Animal Name: Sugar, fi 7, mix, 1yr
Owner Name: Ackerman, Sandi

Test	Result	Reference Ranges
Progesterone Baseline	1.29	Pre HCG 0.09-0.47 ng/mL*
Progesterone Post HCG Stim	4.30	Post HCG Post sample should show a significant stimulation if ovarian tissue is present.

- Mean normal range values for spayed female rabbits.

Comments: Baseline progesterone is elevated above our reference range for neutered rabbits and there was stimulation of progesterone by hCG. Result supports the presence of functional ovarian tissue.

Kellie Fecteau, Ph.D.
